

Opioid Assisted Recovery Program (OARS)

Saskatoon Area

This program is for individuals struggling with the use of opiates (ex. heroin, morphine, Dilaudid or codeine). Where they have attempted abstinence, and/or accessed recovery services, such as detox, outpatient or inpatient treatment programs to address their opiate use.

Despite their best efforts they continue to struggle with opiate use.

The Opioid Assisted Recovery program may be an additional option for these individuals to consider.

Under the care of a physician, prescribed methadone can assist individuals with the physical withdrawal and cravings for opiates, which allows them the opportunity to develop individualized recovery skills.

The benefits of choosing OARS can include: decreased exposure to HIV and Hep C, improved nutrition, decreased illegal activity associated with opiate use and the opportunity to establish/re-establish healthy living.
