

VASOGRAM

PREPARATION

There is no preparation for this test.

PROCEDURE

The vasogram is an X-ray of the vas deferens and is performed in theatre under a general anesthetic. The procedure consists of a special dye being injected into the vas deferens (the tube connecting the testis with the seminal vesicles) and then x-ray films are taken. The aim is to pinpoint the exact site of any blockage in the vas.

Time to perform: 30 minutes
