

Jim Pattison Children's Hospital & Royal University Hospital - September 2017

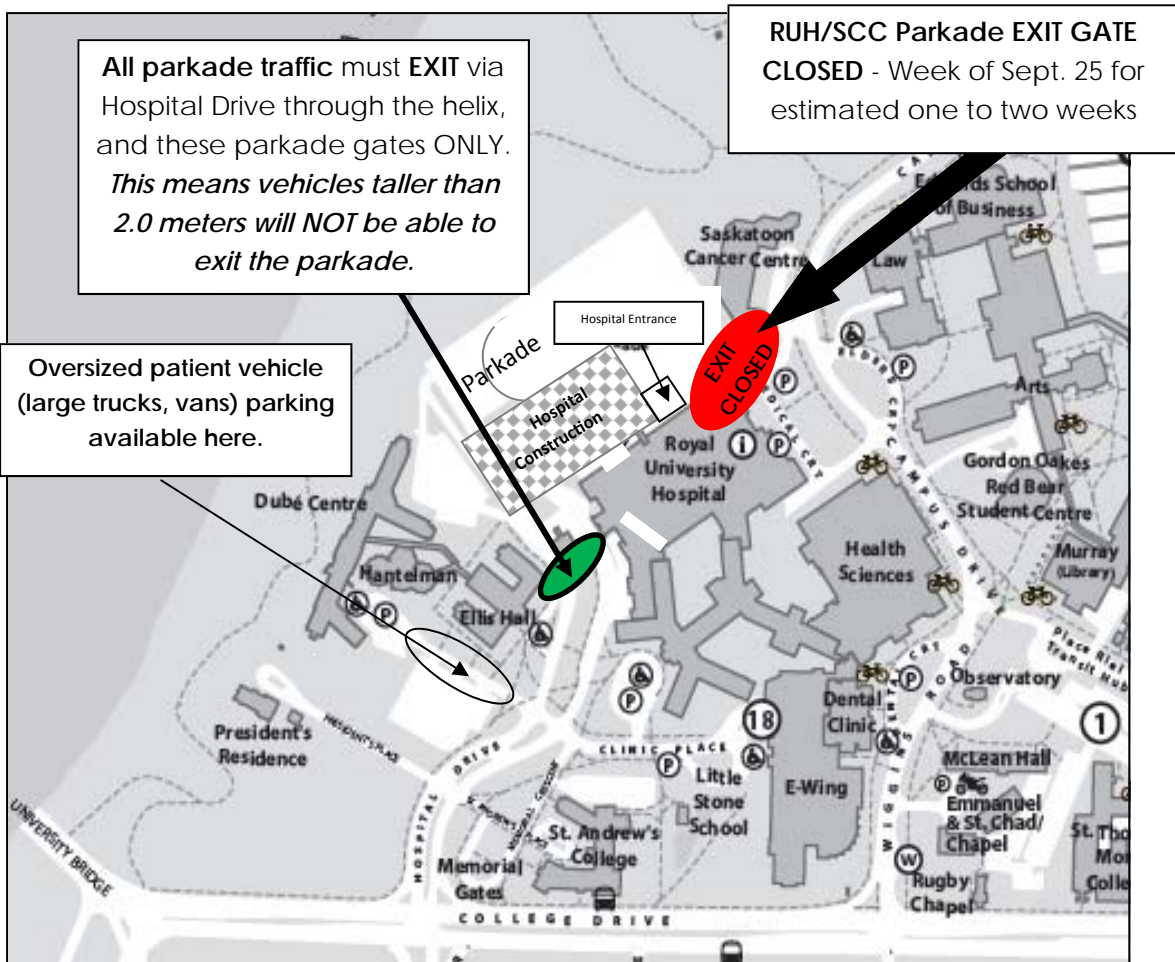

TEMPORARY CLOSURE - PARKADE EXIT GATE NEXT TO SASKATOON CANCER CENTRE

Starting the week of September 25, construction crews will need to work on ongoing facility connections between the two hospitals, resulting in the temporary closure of the parkade exit adjacent to the Saskatoon Cancer Centre.

All vehicles will need to exit via the parkade helix, which has a height restriction of 2.0 metres.

This closure is for the continuing construction required for the new maternal and children's hospital electrical duct bank. Excavation around the SCC/RUH parkade gates is needed to support this work and the exit lane will be closed for safety reasons.

This gate closure was initially scheduled to last over the summer months, but crews were able to come up with alternatives. The result was a one week exit gate closure at the start of summer, and now will this additional one to two week closure. Please ensure that all patients, families, staff and physicians are aware of this gate change.

EXPECT SIGNIFICANT DELAYS WHEN ENTERING AND LEAVING THE PARKADE

Give yourself, and advise your patients and their families, to give themselves extra time when driving to and parking at this site.

We apologize for the disruption and thank-you for your patience.
